## How to Install CFAWin8 ShopFloor

### I. On the Client:

1. Install .NET Framework 2.0 SP1, 3.0, or 3.5 on the client.
2. Run the SQL Server Client Network Utility by going to Start ► Run and type cliconfg.exe. In the General tab, set Named Pipes and TCP/IP as Enabled Protocols.
3. Create a folder name **CFA** via My Computer.
  - If you're running 32-bit Windows, navigate to C:\Program Files
  - If you're running 64-bit Windows, navigate to C:\Program Files(x86)
4. Open the CFA folder.
5. In the CFA folder, create a subfolder named **CFAShopFloor**.
6. In the CFAShopFloor folder, **verify users have Modify permissions**.
  - If you're running 32-bit Windows, verify that users have Modify permissions to the C:\Program Files\CFA\CFAShopFloor folder.

**OR**

- If you're running 64-bit Windows, verify that users have Modify permissions to the C:\Program Files(x86)\CFA\CFAShopFloor folder.
8. Create a UNC shortcut to the StartCFAShopFloor.vbs file (located on the server.) Copy the shortcut to the client desktop. **Place in the All Users desktop folder on the client so it is available to all users who log into that client PC.**

### II. To verify that the preceding instructions have been followed correctly:

1. Double click the StartCFAShopFloor.vbs shortcut that you placed on the desktop.
2. Verify that CFA ShopFloor opens.
