## How to Deactivate Windows Scrolling Restriction

### This option originated with Microsoft Windows 10!

- Customers noted the issue when using CFA's Shop Floor module but may have implications in the core CFA application.
- Issue: Mouse wheel scrolling does not scroll through drop down box options without hovering the mouse cursor over the drop down box.
- Disabling this feature forces the need to select the window or drop down box first before using the mouse scroll functionality.

#### I. Disable the Windows 10 Option:

1. *Navigate to Settings -> Devices -> Mouse*
2. *Set "Scroll inactive windows when I hover over them" to Off*
